

Nemoto Pigments for Cosmetics

Luminescent Zinc Sulphide has been approved by the US FDA for colouring externally applied facial makeup preparations and nail polish. Certain use conditions apply to pigment loading and length of use.

The phosphorescent pigments which complies with this recommendation are: GSS-NT and GB-U-NT. Regarding fluorescent pigment we have GBF-2F.

Use Conditions:

The colour additive luminescent zinc sulphide may be safely used for colouring externally applied facial makeup preparations and nail polish to the following restrictions:

- The amount of luminescent zinc sulphide in facial makeup preparations shall not exceed 10 percent by weight of the final product.
- Facial makeup preparations containing luminescent zinc sulphide are intended for use only on limited, infrequent occasions, e.g. Halloween, and not for regular or daily use.
- Do not use in the area of the eye.
